Experience tested over the years

Lviv Distillery PJSC is a company with a long history. The company dates back to 1931 and has become one of the leaders in the alcoholic beverage industry with warehouses and stores in all provinces of Galicia, and was the first to master the production of natural spirit vinegar based on German technology.

The plant has been producing high quality and exclusive types of alcoholic beverages: vodka, liqueurs, and tinctures, constantly expanding its range and improving its production technology. The products of Lviv Distillery are well known and highly appreciated not only in Ukraine but also abroad, as evidenced by numerous awards.

Ecological products

Lvivska Gorilka is made of natural ingredients. The process uses high-quality grain alcohols of "Deluxe" and "Extra" class, as well as water treated using modern equipment. To make the vodka particularly pure and soft, it is passed through charcoal and quartz sand filters. The liqueurs are made of natural juices produced from berries picked up in the pollution-free Carpathian region. Lviv vodkas and liqueurs owe their popularity to the extensive range and consistently high quality.

How we create our products in Ukraine

Alcohol
We produce our products using proven alcohol from the best distilleries in Ukraine, which is made from corn grits grown under the careful supervision of farmers in the fields of Kherson and Mykolaiv regions.

Bottles
The bottles used for our products come from three glassworks in Rivne and Kyiv regions, where they are made according to our special pattern and bear our branded stamp, adding personal touch to the product and protecting the same against counterfeiting. Each bottle we use for bottling our product undergoes a three-stage selection process to ensure its top quality.

Water
For the production of alcoholic beverages, we use water extracted from the foothills of the Carpathians. After extraction, the water undergoes 6 stages of purification and thorough laboratory analysis at our plant, and only after a positive laboratory report, it is allowed to be used in the production of the product.
